Number: 5.15.0615-2025

SPECIFICATIONS

Made in: Germany

HS Code: 49059900

DESCRIPTION

The most exciting waterways can be found in Inland Volume 4 of NV Charts. The Elbe the Elbe-Lübeck Canal the Mittelland Canal and the Elbe-Seiten Canal are all highly frequented waterways with plenty of commercial shipping. This should be taken into account in any case. In addition there are countless motorboats from the Mecklenburg and Brandenburg areas. You can reach the Baltic Sea directly via the Elbe-Seitenkanal or further downstream to the North Sea via our beautiful Hanseatic city of Hamburg. The chart set consists of 53 district and detailed charts. The NV Sportschiffahrtskarten Binnen are a set of coloured charts at a scale of 1:35 000 specially designed for inland waters. The charts were developed according to the concept of being practical to use and precise in the information they provide. Large-scale details and tightly written texts provide information on water depths passage heights locks moorings and places of interest. An index and an overview map make finding the area quick and easy. An emblem on each page reveals the location in the area. The logical clear layout facilitates orientation as does the kilometre marking in the map margin. Dangerous spots highlighted in red and views of prominent points round off the multi-volume map series.
