## SPECIFICATIONS

Made in: United State

HS Code: 90200000

## DESCRIPTION

### EEBD 3M Scott Elsa (10min) - MED/SOLAS

The 3M™ Scott™ ELSA 15 is a robust Emergency Escape Breathing Device designed for fast, reliable egress in marine and industrial environments. Automatic "quick-fire" activation starts airflow the moment the bag opens; the high-visibility hood with elastomeric neck seal slips over glasses and facial hair for a universal fit. Certified to EN 1146 and MED "wheelmark", the constant-flow system delivers a full 10 minutes of breathable air, housed in a tough stowage bag (hi-vis or anti-static). Built for low-maintenance ownership with long service life and proven components, ELSA helps crews escape safely when seconds count.
