AED - Philips HeartStart FRx (English)

Number: MEAED-PHFRx-UK

SPECIFICATIONS

Made in: China

HS Code: 90189084

DESCRIPTION

The Philips HeartStart FRx defibrillator is designed to be easy to use, durable, and reliable. Whether on-site with police, in the field with athletes, or in the office with employees, the FRx defibrillator is the solution for treating sudden cardiac arrest in environments that are too demanding for other AEDs. At the core of HeartStart defibrillators lies SMART Biphasic technology. The AED delivers a highly effective shock that is gentle on the heart. The SMART Analysis system ensures that the FRx only delivers a shock when necessary, even if a lay responder presses the shock button.

Key Features and Durability

- Rugged Protection: The HeartStart FRx offers optimal protection against external elements such as water and dust (IP55 rating).
- Shock Resistant: Even after a drop of one meter, the HeartStart FRx continues to function reliably without requiring a technical inspection.
- Infant/Child Key: By using a special infant/child key, you can use the standard electrodes on infants and children under eight years old (or weighing less than 25 kg). This eliminates the need to invest in separate pediatric pads.

Advanced Support for Responders

The HeartStart FRx also allows you to activate comprehensive voice prompts. This guidance leads the responder through the entire CPR process, providing support that many users find invaluable. To ensure the device is always ready, the electrodes come pre-connected and are checked during the automatic self-test. This saves precious time during an emergency. Furthermore, the electrodes contain sensors that allow the AED to adapt its instructions to the actions and pace of the responder.
