Mariner's Guide to Marine Surveys and Inspections - A Comprehensive Handbook for Masters, Officers and Maritime Professionals, 1st Edition

Number: 6.67.0057

SPECIFICATIONS

Made in: United Kingdom

HS Code: 49011000

DESCRIPTION

This Guide provides practical guidance for Masters, officers and maritime professionals on preparing for and participating in the full range of marine surveys and inspections. It explains the purpose of different survey types, outlines surveyor expectations, and offers practical advice, preparation checklists and real-world examples to help crews improve survey outcomes and maintain safe, compliant operations.

Developed to help bridge the gap between surveyors and seafarers, this Guide provides a practical understanding of marine surveys and inspections from both operational and regulatory perspectives.

It examines the principal survey and inspection regimes encountered throughout a ship's operational life, including statutory and classification surveys, technical inspections, emergency assessments and cyber security audits. The book explains the relevant regulatory framework, Classification Society requirements and common deficiencies, while providing practical guidance on survey preparation, participation and best practices.

Drawing on operational experience and real-world examples, each chapter includes preparation advice and practical measures to help crews avoid common pitfalls and support effective survey outcomes. It also considers legal aspects, emerging technologies and future developments in marine surveys, while the annexes provide survey checklists, preparation plans and sample survey reports as practical reference materials.
