DermaBOND Mini Topical Skin Adhesive - 6 pcs

Number: MENOGEPA10.4ST12

SPECIFICATIONS

Made in: Netherlands

HS Code: 30049000

DESCRIPTION

DERMABOND mini Topical Skin Adhesive

DERMABOND mini is a sterile, liquid, topical skin adhesive for external use. The tissue adhesive can be used alone or as a superficial addition to absorbable sutures placed inside the wound.

Clinical studies have shown that after application, DERMABOND mini skin adhesive acts as a shield against microbe penetration into healing tissue.

Product Details for DERMABOND Skin Adhesive

Topical skin glue from Ethicon

Made from a monomer (2-octyl cyanoacrylate)

Colour: purple

Slightly thicker than water on the skin

Polymerises within a few minutes (2.5 minutes to full mechanical load capacity)

Curing time: 45-90 seconds

Microbial barrier

No changing of dressings

Water-tight, patient can still shower

Easy and quick application

Safe adaptation of wound edges

Storage at room temperature

1 pack contains 12 x 0.36 ml vials

Product Usage Notes for DERMABOND Skin Adhesive:

Meant for external use only

Not a substitute for intra- or subcutaneous sutures!

For simple, thoroughly cleansed traumatic lacerations and small incisions with a length of up to 4 cm

To reduce the tension at the edges of the wound, the deep layers of the skin or the subcutaneous tissue can be sutured before applying DERMABOND mini topical skin adhesive.
