Digital night vision (Binocular type) Luna LN-DB60-HD Gen 2+

Number: 1.65.0015

SPECIFICATIONS

Measurements: 228 (l) x 120 (w) x 64 (h) mm

Weight: 1,20 kg

Made in: United State

HS Code: 90051000

DESCRIPTION

Luna Optics LN-DB60-HD Full-HD Day and Nightvision with Recorder 6x50

The Luna Optics LN-G2-B50 (formerly known in the market as the LN-DB60-HD) is a digital compact lightweight bi-ocular that you can use both at night and during the day, and allows you to connect to Wi-fi! In contrast to the standard night scope, this viewer can be used both in daylight and in complete darkness. This makes the viewer extremely suitable to use for hunting, security and observation. In addition, this is the first in its series that offers possibilities for external Wi-fi. Through this option you can use your device to view HD recordings in real time, start and stop recordings, download and much more!

Using the built-in IR illuminator, you can provide extra infrared light (without visible beam) and brightness in the darkest nights. You can choose between infrared, nightvision green and black/white. Nightvision green shows you more details in the dark. The black/white option ensures high contrast and is ideal for use for reading texts, symbols on buildings and license plates, for example. In total darkness you can watch up to 200 meters and distinguish people from each other. The brightness control and image optimisation ensure that you can adjust the viewer to your own preferences. The viewer is waterproof, but it is not recommended to use it during heavy rainfall.

The LN-G2-B50 (before 2020 known as LN-DB60-HD) has won the award for 'Best Night Vision Binocular of 2019!' Additional information about this can be found [here](#). You can also download the detailed manual below (version February 2021)

Usage Luna Optics LN-G2-B50

On the underside is a 1/4" thread, so that the viewer can be attached to a tripod. On the top there is also a 1/4" thread, to which you can connect an infrared amplifier for even clearer night vision (see optional accessories). In daylight, it is recommended to reduce brightness and use the supplied color enhancement filter. This ensures a vivid reproduction of daylight colors and prevents overexposure. You can easily connect the LN-G2-B50 to Wi-fi by downloading the 'Wifi Action Camera' app, or by scanning the QR code from the manual.

Included:

- 1x Digital Day and Night Vision Binocular LN-G2-B50 (formerly known as LN-DB60-HD)
- 1x Wrist strap
- 1x Neck Cord
- 1x 8GB MicroSD Card
